

Choose your robot's next job

Name: _____

Date: _____ Period: _____

Choose one of five builds, test it and explain how you improved it.

Choose ONE build

1. Parcel delivery robot - full module: 5-8

Carry a paper parcel to a red-line delivery space.

2. Drawing robot - full module: 9-12

Draw a short line on a protected paper surface.

3. Paper sweeper - full module: 13-16

Push three light paper pieces into a collection area.

4. Ball-pushing robot - full module: 17-20

Guide one light paper ball toward a goal.

5. Rescue carrier - full module: 21-24

Tow a light paper figure on a small rescue sled.

Your teacher will give you the pages for one build. Class 1: choose and build. Class 2: test, improve and share. The page numbers above refer to the complete module workbook.

Plan before you build

Our chosen job:

Why we chose it:

LOOK AT THE IDEA

Keep your notes. Change one thing. Try again.

Words to know

Attachment: A part you add to the robot for a new job.

Evidence: Measurements and notes that show what happened.

Handover: Directions that help someone else use your robot.

Draw the attachment and label where it joins the base.

- ☐ Teacher check: parts secure, wheels and sensor clear, Stop ready, test area clear. Power off before changing parts.

Choice 1: Parcel delivery robot

Name: _____

Date: _____ Period: _____

Carry a paper parcel to a red-line delivery space.

LOOK AT THE IDEA

Cut out the four shaded corners.

Fold on the dashed lines.

Tape corners to make a low tray.

Gather your materials

- The shared checked base
- Thin card about 12 by 8 cm
- One paper parcel about 4 by 3 by 2 cm
- Ruler, scissors and removable tape

Use the same teacher-checked base. The drawing explains the attachment; it is not a full-size cutting template.

Build your attachment

- 1 Measure the clear mounting space on the base. Cut the card to fit it. Keep at least 1 cm of room between the attachment and any wheel. Make it smaller if needed.
 - 2 Draw a fold line 1 cm inside each edge. Cut out the four corner squares. Fold all four walls up and tape the corners to make a shallow tray.
 - 3 Fold a light paper parcel. Place it in the center of the tray. Add a small folded-paper stop at each end if it slides. Do not add heavy contents.
 - 4 Turn the robot off. Use the teacher-approved mounting points and removable connectors to hold the tray flat. Keep buttons and the sensor clear.
 - 5 Raise the wheels and check for rubbing. Then place the robot on the white lane from lesson 6. Keep the broad red strip and empty space beyond it.
 - 6 Run the code below three times. If the parcel falls, change one tray feature and repeat. Unload the parcel by hand only after the robot has stopped.
- ☐ Teacher check: parts secure, wheels and sensor clear, Stop ready, test area clear. Power off before changing parts.
