

Choose your robot's next job

Name: _____

Date: _____ Period: _____

Choose one of five builds, test it and explain how you improved it.

Choose ONE build

1. Parcel delivery robot - full module: 5-8

Carry a paper parcel to a red-line delivery space.

2. Drawing robot - full module: 9-12

Draw a short line on a protected paper surface.

3. Paper sweeper - full module: 13-16

Push three light paper pieces into a collection area.

4. Ball-pushing robot - full module: 17-20

Guide one light paper ball toward a goal.

5. Rescue carrier - full module: 21-24

Tow a light paper figure on a small rescue sled.

Your teacher will give you the pages for one build. Class 1: choose and build. Class 2: test, improve and share. The page numbers above refer to the complete module workbook.

Plan before you build

Our chosen job:

Why we chose it:

LOOK AT THE IDEA

Keep your notes. Change one thing. Try again.

Words to know

Attachment: A part you add to the robot for a new job.

Evidence: Measurements and notes that show what happened.

Handover: Directions that help someone else use your robot.

Draw the attachment and label where it joins the base.

- ☐ Teacher check: parts secure, wheels and sensor clear, Stop ready, test area clear. Power off before changing parts.

Choice 5: Rescue carrier

Name: _____

Date: _____ Period: _____

Tow a light paper figure on a small rescue sled.

LOOK AT THE IDEA

Gather your materials

- The shared checked base
- Thin card: one 12 by 6 cm piece and one 12 by 2 cm strip
- A flat paper person, two paper strips for bands, removable tape and scissors
- Ruler and a clear straight lane

Use the same teacher-checked base. The drawing explains the attachment; it is not a full-size cutting template.

Build your attachment

- 1 Use the 12 by 6 cm card as a sled. Fold each long edge up by 1 cm. Curl the front edge slightly upward so it does not catch on the floor.
 - 2 Draw and cut out a small paper person. Lay it flat on the sled. Add two loose paper bands across the sled and tape their ends to the sides to hold the figure in place.
 - 3 Use the 12 by 2 cm card strip as a wide tow bar. Tape one end flat to the sled's front. Make a small folded tab at the other end.
 - 4 Before attaching it to the robot, pull the sled gently by hand using its wide tow bar. It should slide without catching. Keep it light and use only a straight route for this task.
 - 5 Turn the robot off. Ask the teacher to connect the tow-bar tab to a fixed rear mounting point. Keep the whole strip centered behind the robot and away from the wheels. Do not use loose string.
 - 6 Run the short program below three times. If the sled catches or a wheel struggles, stop. Smooth the sled edge or shorten the route, then test again.
- ☐ Teacher check: parts secure, wheels and sensor clear, Stop ready, test area clear. Power off before changing parts.
