

Choose your robot's next job

Name: _____

Date: _____ Period: _____

Choose one of five builds, test it and explain how you improved it.

Choose ONE build

1. Parcel delivery robot - full module: 5-8

Carry a paper parcel to a red-line delivery space.

2. Drawing robot - full module: 9-12

Draw a short line on a protected paper surface.

3. Paper sweeper - full module: 13-16

Push three light paper pieces into a collection area.

4. Ball-pushing robot - full module: 17-20

Guide one light paper ball toward a goal.

5. Rescue carrier - full module: 21-24

Tow a light paper figure on a small rescue sled.

Your teacher will give you the pages for one build. Class 1: choose and build. Class 2: test, improve and share. The page numbers above refer to the complete module workbook.

Plan before you build

Our chosen job:

Why we chose it:

LOOK AT THE IDEA

Keep your notes. Change one thing. Try again.

Words to know

Attachment: A part you add to the robot for a new job.

Evidence: Measurements and notes that show what happened.

Handover: Directions that help someone else use your robot.

Draw the attachment and label where it joins the base.

- ☐ Teacher check: parts secure, wheels and sensor clear, Stop ready, test area clear. Power off before changing parts.

Choice 2: Drawing robot

Name: _____

Date: _____ Period: _____

Draw a short line on a protected paper surface.

LOOK AT THE IDEA

Card sleeve

Marker tip just touches the paper.

Wheels stay on the surface.

Gather your materials

- The shared checked base
- One washable felt-tip marker
- A card strip about 12 by 3 cm and removable tape
- A large sheet of paper over a protective mat

Use the same teacher-checked base. The drawing explains the attachment; it is not a full-size cutting template.

Build your attachment

- 1 Cover a large floor area with a protective mat and paper. Tape the paper edges flat. Ask the teacher to approve the marker and surface.
 - 2 Wrap the card strip loosely around the marker to make a sleeve. Tape the card to itself. The marker must slide up and down inside it.
 - 3 Turn the robot off. Fix the sleeve upright at a teacher-approved point behind the wheels. Keep it away from the sensor and moving parts.
 - 4 Slide the uncapped marker down until its tip just touches the paper. Secure the marker in the sleeve with a small removable tape tab. It must not lift the wheels off the paper.
 - 5 Raise the wheels and check the short program. Put the robot back on the protected paper with enough space for the whole run.
 - 6 Draw three short lines. Stop and turn off the robot before lifting or adjusting the marker. If a line has gaps, lower the tip a little; if the robot struggles, raise it.
- ☐ Teacher check: parts secure, wheels and sensor clear, Stop ready, test area clear. Power off before changing parts.
